don't ever mine the mct always spread the mines apart like the guy in the first reply says in a 5 dice thing you want to scare the engineers and confuse them, you can't kill em everytime with the mines, it's less effective if you put mines in 1 straight line, and if they touch they can be disarmed in 1 time, and mines on mct will never hurt anyone, it only makes the enemy c4's on your mct harder to diffuse later fcdrazen's mother
