How is this for stupid - I was playing on a no guardtower/oblesk map as GDI and our weapons factory was destroyed. A flame tank comes over and tries to rack up points. Being a mobius, I start zapping away (the flame tank has realized this and started flaming me - I was standing inside the sandbag area of the barracks). Anyway, its almost dead and so am I. Thankfully, I see several hotwires closing in. But of course they would repair the FLAME TANK and let me die. Bah.
