Reducing the power of the flame tank is a bad idea because:1.) Against a mammoth or a medium tank you stand only a chance if you approach hima) unnoticed untill you get in range of fire andb) You have full health and armor. If someone scratches your paint before you reach your target you

complete newbie. You loose even against a Mrls if spotted early because of their firepower.2.) Without the flametank Nod has no good anti-mammoth tank. If there is a mammoth camp and gdi

only hope to get out of this situation alive because some hotwires repair the mammoths faster than the light tanks damaging it.
