Talking about the demo map. I know this topic was discussed in the past but i've never seen it done. I can run into the nod base and get into either the hand of NOD or the power plant as a hotwire. It's not that difficult from the far tunnel as long as you don't run into mines.But how do you get into the GDI base? i've tried using stealth black hands and techs because they have high armor. I run through the furthest tunnel towards the back of the barracks. I always get killed. How can it be done?
