Well here's what I do. Trust me! This strategy works! I run it and gun it until I have enough cash to buy a tank, either Light or Medium, you know, something that will get me there fast and has good armor. I use the engineer and ready C\$ before I enter. I get in, rush the defense tower, and for the Obelisk, I evade as much as possible and dive into the Obelisk Tower before the turrets and mow me down. Then I plant both C4 charges and the timed bomb at the MCT. You may need to do this twice. For the Advanced Guard Tower, I get close enough to it so it can't fire that low at me. I drive around back and block off the door to the Tower with my Light Tank, and I follow the same procedure. When I need to get out of the Tower, I just use my Repair Gun on my tank. Repairs won't work for the Obelisk since your tank will be scrap by the time you get close! Trust me! This works wonders! This also works great with standard structures. "Who doesn't love good old-fashioned C4?" -Havoc, with C4 at the ready.
