One thing that a lot of people don't realize... You know how stealth tanks sometimes turn slightly visible when you're near them and when you shoot them? Well if the ground you're on is pure white, you can't see them AT ALLLLLLLLL..... (while cloaked that is). In under, a great place to have a stealth tank is the small white area between the GDI sniper point and the tiberium field (you know, the weapon spawn point). Sit there destroying the harvester and when you see tanks come out just stand perfectly still. They can't see you! Oh, and in boxed in, the ground in the GDI base is all white... once the tower is out they don't stand a chance against a stealth rush!
