<http://n00bstories.com/image.fetch.php?id=2094130455> Why wont the dam mountain textures load? Deafwasp made and textured the mountains for me. (thanks) But when he textured them he didn't give me the one that he used. So I put another texture on. It was "01lv1-cliff7.tga". It loaded fine in renx. But didn't when I exported it to level edit. I put it in the same folder as all the other textures. The same one the .gmax file is in. All the other textures work fine. What should I do?
