BlazeRenBot is an IRC Bot written in PERL, that interfaces with your Renegade server. It allows people on IRC to watch what is going on in your server, and execute commands to send messages, kick people, etc.The bot itself isn't anything wonderful, msgtpain's "GameBot" is vastly superior at this point. But I just started working on this, and plan on releasing it as a user-friendly package when I am done. Also, a lot of the code will be merged into the Unix version of BlazeRegulator, which will probably have an option of enabling the IRC Bot.I will post regular updates/screenshots as progress is made. http://www.n00bstor ies.com/image.view.php?id=1268343531 [December 12, 2002, 21:30: Message edited by: Blazer]
