quote:Originally posted by DeafWasp:no i mean , what is holding them up? (if it was real)Floating rings that shoot electric bolts is messed up. Unless static-e creates some sort of feild that levetates them. but in that case would be stooopid.heres my veiw: That model is perfect.But the design (that ww made) dosent make sense (IMHO).Well - it may be magnetic repulsion that is levitating the rings above the base --and the rings dont shoot the electricity - the big knob on the top does -- like a Telsa coil.all in all - nice weapon -- and in RA2 - was slick how the soldiers got fried by it.... zaaaaaap.
