quote:Originally posted by Vendacious:I know this is a little off topic, but I'm becoming rather desperate.I have a Nvidia TNT graphics card, and downloaded the new drivers 15 minutes ago. After the first reboot (the one mandated by the installation of new drivers), everything worked fine and the graphics problem I had with Renegade was fixed. But, I shut down my computer, go have supper, come back, and BAM!!!! My computer can't go above 720x526 reselution. Being one of those people used to 1124x1028, I just can't stand being in this low of a resolution.What I want to know is if anyone else had this problem, and does anyone know how to fix it?ThanksHavent heard of this paticular problem - did your try to reinstall the drivers?also- is your monitor correctly setup in the display properties? it may of reverted to a less capable monitor...
