actually greg, there is a tool available to rename w3d files, but as you said, it is not quite as simple as just renamin the w3d file from windows explorer...you need a tool such as <http://prdownloads.sourceforge.net/rentools/w3dtool.zip?download> from jonathan wilson to rename the w3d.Special note... only ADVANCED users should attempt this, as if you don't you will most likely mess it up.
