I know Im an Idiot, so spare the flameing. LOLI followed both INGROWNLIP and ACK tutorials about Vertex paint textures. My plane has 50 percent of both textures and the paint wand dosnt seem to make those black marks and paint the other pass. its just blending the two textures together, what in the heck am I messing up?I really want this terrain to look nice.and, thanks for the clue about uvw map box for rocks and hills, made it look better.
