Lol...did you see the first texture map ACK made for this gun? It looked more like a cinderblock than anything else, with a bunch of weird spiral slashes in the back, looking as if someone attacked it for ten minutes with a pocket knife.

Also, supposedly, the rocket soldier now gets two guns, which I thought was cool, until I looked at the other launcher he gets, the M47 Dragon ATGM:

Little big, huh?

Oh, and will the RenAlert team be able to incorporate anything with missiles being wire-guided, owing to the fact that the Dragon is a wire -guided launcher?
