Hi,

I have a big Problem!
I want to host a Renegade Server on my Server (680Mbit/s)
But if I run the Server executable (RH8 server version) it always says
***Auto starting game. Type 'quit' to abort ***
It always goes on!
I have a SuSE Linux 9.0 Server and I want to host a Ren Server. If anyone can help me or wants
to install it with all the tools contact my by E-mail ASAP!!!
If you hurry it will be Online and will never shutdown! A high performance Server with a 680Mbit/s
connection!

Please HELP ME!!!
