sniper12345RenxIf you want an example of what Aircraftkiller was talking about....look at the Gunboat, he did that one.

Some of Darkblades do look very good though, I personally like the Spy icon the best, it's a perfect replica of the Red Alert one. Unfortunately it may have to be redone

Why does it have to be redone? I mean, why fix something that isn't broken?

There are multiple Soviet units you can choose to be as the Spy, and this one doesn't exactly let you know which one you're going to be...

Maybe we'll just add the weapon of the unit you're going to be in the corner of each of the Spy's icons so you'll know.
