what you can do is, rename the current game.exe (RG) to Renguard.exe
and then rename game2.exe back to the default game.exe.

Then when you double click the Renegade icons from the desktop and/or start menu, it will launch Renegade instantly.

You will still have Renguard on your system, but it won't be launched when you load up renegade.
To get RG back again, just do the reverse from the above steps.

Andy.
