I have been searching for public games to play, and lately i have seen [CS] instead of [BR] . Does anyone know what this stands for and where to download it?

Becuz i run a server running on [BR], but unfortunately it comes with Renguard and i am running on a LAN router so i cannot join the game, it says the solution is to make a ccs_ignore.txt file, when this is made it still does nothing and i am still kicked with Renguard on.

So does anyone know where to download CS or help me figure out this Renguard situation.
