Read this article. It's 9 pages, but you must read it. This is how President Bush is going to steal the election to be re-elected this November. By using faulty touch-screen electronic voting machines that leave no paper record so there can be no record. These machines are also easily hackable. All of the data disks that store the votes to be sent to central computers have the same password (1111). All 22,000 of them. And, Diebold [One of the companies that makes these machines] has posted the source code for the machines on an unprotected FTP site.

President Bush can't win the good 'ole fashion way by getting more votes than John Kerry, so he's going to use Republican-controlled voting machine companies and disenfranchise thousands and thousands of black voters.
