punkun21Hmm where do you get your 90% figure...

Well, let's make a calculation, using 1 number that isn't just made up and let's say that everybody on the forums is in a way talking the truth when using numbers. Yes I'm bored

10 % percent doesn't cheat in this community. Now let's look at this number 2617 players have logged into RenGuard in the last 24 hours.[/b]

Let's say all non cheaters run RenGuard and have played the game in the last 24 hours, that means that 10 % of the community = 2617

wich means that the whole community is 26170 big. Now this number could actually be not far away from the truth, because icedog90 said:

Quote:There are currently more than 25,000 thousand ranked players in Renegade right now

What numbers do we have now:

10 % of comminty = 2617 or rounded 2500

100 % of community = or rounded 25000

number of ranked players = 25000 (so the 100 % could be right)

Now 90 % of community = 23553 or rounded 22500

This would mean that there are actually 22500 people cheating. That is a lot of cheaters.

Everything number of course is just based on assumptions, and I have some serious doubts they are true.
