SeaManOk.. I got an idea about this...

A "jukebox" script. Basically what it does is to play a twiddler (Eg. Twiddler_Music) (to randomly pick music preset) a and repeat the task.

Made this a month and a half ago, it's easy to do, but I dropped it in favor of pressing keys to choose the music I want to listen to. Currently I just have to hold down the M key and select a soundtrack using the numpad numbers.
