Im a server owner and my server has been crashing more than others I have noticed. We use Server Matrix and we are running BRenBot. I have installed all of the patches, they havent really helped at all. Now i can usually get thru 2 maps instead of 1. Anyhow this idiot is starting to take its toll on Renegade. We as a community need to do sumthing about this. Im not sure what to do yet but if we all keep each other informed maybe we can figure sumthin out. One other thing, the only thing that seems to keep my server up longer is when i change the hostname to sumthin else new. Of course then it eventually will start happening again. And how come some servers seem to stay up a lot more than others?
