Subject: GSA Server Crashing?

I thought the crashes were WOL related at first but it turns out they are not.

The server when WOL was still there used not to crash on GSA when they were hosted there.

But now that WOL is down and we HAVE to host on GSA, they crash just as often as they would do on WOL.

So the people responsible for WOL servers to crash (if this is the case) are now due to westwood being offline crashing the servers on GSA instead lol.

Anyone elses servers also crash on GSA now?
