zunnie Thats not possible because we run RenGuard there will be NO cheaters.
And, in addition to that RenGuard supports Serial Banning so thats not an argument neither.

A lot more servers NOT running renguard compared to ones that aren't RG servers account for only 20% of renegade servers.

[quote="Naamloos"]A lot of people, like me, can't play on gay spy.

zunnie

Because the serials are not registered with GaySpy database.

first I have heard of this, regardless, whats worse having a few people not being able to play or having NO-ONE being able to play because stupid ass wol is down?

zunnie Its not the tag that causes problems.

Its a pain in my ass to kick these fuckers whenever they break the rules.

And in addition to this kicking these fuckers is ALWAYS a "quick kick" , they can rejoin the same minute as they were kicked. GAY!!!

stop making bullshit up, gamespy does not allow spaces nor does it allow the use of special characters :rolleyes: These people with special characters use renip/ase to connect :rolleyes: And guess what they can still join precious wol ONLY servers and there is nothing you can do about it either.

btw last time I checked I checked KICK is supposed to mean you can rejoin immediately, its wol's buggy system that makes you restart renegade before you can join.

In the end you end up on gamespy, if you hate it so much why the hell host a server on gamespy and why use wolspy for that matter? stick to wol only mode, or accept gamespy is a better & more stable platform.
