snipesimoMy hard drive has plenty of free space, and it is defragged nightly. I have the fast load maps, and the no CD crack. When loading, the bar moves very quickly then freezes on about 1/4 complete for around 10 seconds, then it goes to 7/8 done and freezes there for another 5 seconds. The total load time is about 20 seconds.

This is how it is for me without the quickload maps. It only does it the first time I load a map. After that, they load almost instantly.
