Subject: PHP Mail bomber, what do you think?
Posted by spreegem on Fri, 03 Sep 2004 23:16:31 GMT

Well, I made this a little earlier today because I got bored, it's a PHP based mail bomber. You can bomb any e-mail address you want, with any e-mail address you want, and you can have it send it as many times as you want.
(warranto says: bye bye link)

I don't know what other people would use this for, but I felt like making it so I could bomb a couple annoying people and decided to let everyone else use it as well. Also, if there is a bug, or soemthing you would liek added, changed, or whatever, just post it here.

PS. If you could, please click the ads at the bottom, THANK YOU!
