```
Send_Message rpass, 16777343, rport
Send_Message msg, 16777343, rport
```

```
fdsmg = String$(26601, vbNullChar)
Get_Response fdsmg 'connect info
```

```
Send_Message "Bye", 16777343, rport
```

```
fdsmg = String$(26601, vbNullChar)
Get_Response fdsmg 'main msg
```

```
trash = String$(26601, vbNullChar)
Get_Response trash 'goodbye message
```

^_^, unfortunately, this appears to cause problems with Service 0.o (crashes, after it has been called several times)

this may not be exactly how to use FDSTalk.dll from VB6, but we are getting somewhere
