Aston shell is a Windows replacement shell. It would replace your explorer.exe.

Some things that are beneficial in using it are:

Biggest benefit is that it uses considerably less memory than Explorer. (avgs about 2MB after initial load.)

It also is very customizable in both looks, and how you can use it. (has plug-in's available via astonshell.com or you could write your own).

Very stable. In all the time I've used it, I've never had Aston crash on me without me doing something to provoke it.

More in depth information about it is available at it's site (<http://www.astonshell.com>).
