MadtoneDoesn't take much to split it up....
If someone posts up the 4 parts in .jpg or .gif format i'll use the sizes and slice this version up.
Every pice of the loadscreen is 1/4 of 1024x1024 image and is streched to a ratio of 4:3 later ingames.
You can export these images for example with XCC_Mixer.
(file names are loadscreen_+ for example cnc_1 for theorginal Ren ones)
