Inaccurate model.

Look at the pic :

Wheels bigger, main front part less wide... Pretty bad sizes...

You don't have to change the texture but from my point of view : most of it looks like plastic, more details than a plain grey and green texture would be better. Just scale some parts and it will be ok.

And the tires are different. Why do you still use the wheels of Nod Renegade Supply truck ?  
having problems making new wheels ?
