macPerhaps your server is on the same LAN as you. It can't detect you on renguard than. Use the SSC_Ignore feature.

You can't turn RenGuard off anymore.

Do as mac wrote, Idunno if the SSC_Ignore file is included in 1.36 but in 1.35 you have to create the file yourself (SSC_Ignore.txt) open the file and type in your nickname. Save and close and try again. If thats the case.
