What in the world does WinXP have to do with this?

Oh yes, nothing. Well, it could of had something to do with this had they bothered to put down any sort of minimum requirement list. Failing that, whats reasonable to assume is that it has the same requirements as Renegade, and surprise, surprise, it runs without any sort of sytem corruption problems in Win 98.

If the problem can be derived from win 98 systems, look up negligence.
