Titan1x77it will look for the camera in the ini file inside your renegade folder, just make sure to zip up your camera.ini file [...] I meant using an .ini file "compiled in" the .mix doesnt work.

You won't be able to play online with a modified cameras.ini

and it is even not possible for a Mod. For some wired reason Renegade just ignores it even in a PKG. (Well ok in a full conversation it might work )
