Now i know the load screen mentions new maps like Gobi, they all sound good, but I log into game spy like 6 times a day, and I have never ever come accross a server that is using the new maps. So whats the point of having this Cp1 update, the font is poop, no one uses the maps (if anyone knows a server thatdoes run them please let me know) oh and the load screen takes way longer than it ever used to.

The best update I've ever loaded into my C&C file is the naked mode for the girls (though that an only be seen from outside person view) and a cool new look for Havok
