when running an FDS on my server the server.dat slowly takes up all the cpu usage, in an hour it takes up 52 % and this is on a 2.8ghz with HT

any idea why it might do this? if i have more than 1 FDS on it, it seems to happen even quicker, like 10 mins and it goes mental

any ideas as to why this is happening any steps to avoid it would be much appreciated if anyone could shed some light
