RenGuard v1.04 (Expected Release Date: Mid-Late January)

- Improved network security
 - Improved API hook prevention
 - Improved memory hack prevention
 - Renguard.dll has been eliminated (code has been merged with Renguard's EXE)
 - Verification of contents of the script/bhs DLL's on disk and in memory
 - Preventing (any method, including ones not covered in the updates) RenGuard from scanning files will result in a ban
 - Renegade's EXE (Game2.exe) will be a single version for all users (RenGuard will download a new copy if you don't have the matching version).
 - Improved EXE encryption on RenGuard itself (with added anti-hack safeguards, using commercial protection software)
 - For people with low bandwidth, Renguard will use approximately (it does vary) 60% less bandwidth than before (which wasn't much if you weren't trying to cheat).
 - Download engine now uses IE's core (which is already on your system, even if you don't use IE). Allows for smoother downloads, with less problems.
-
