Well, I used FireFox and my site worked just fine, and then I Used Internet Exploder and I got an error saying that there was an invalid character or something, and then the google ads did not show up. I was just wondering if anyone else had this problem with internet exploder when on my site. I tried it on 2 other computers in my house and it worked fine, it may be just my computer, or maybe others, I don't know. I jsut want to know if anyone else is having this problem? http://www.egmods.com Thanks for your help
