Subject: problem with renguard, need help
Posted by crix on Tue, 28 Dec 2004 18:17:56 GMT

ok well i installed it. now i am downloading the core patch update and while i was doing this the pc froze and ATI vpu recover kicked in saying that the vpu was in deadlock and that it is now put into sowftware mode drawing... im hoping this is just an EXTREMELY rare coincidience, as my pc has been running without problems with the latest drivers for a while now... what would make it do this? i wasnt even running the game, only the core patch updater?
