Madtonehmm, i have never used Lightscape, all i know is its a 3D modeling proggy.

WLT files?? i have no idea what they are.

If you gimme some more info i can see what i can do

Lightscape is a program that allows you to render a scene with light/shadows.

the wlt is a file that Westwood generated and used in the models - so when the building was destroyed - it was red inside - or various colors (their the wierd named files in the always.dat)

if you look at them in xccmixer - you will see streaks of light/colors.
