When I got home today and tried to load up Renegade it didn't work. It brought up the screen where Rengaurd loads and says "click renegade to play". So I click Renegade and it brings up the same screen. It just kept looping. I unintsalled Renegade and reinstalled. This time the games messes up when I try to install CP1. Right after I installed it, it said my always.dbs was currupted and I needed to download their version of it. I download their version and try to install Cp1. It goes through the installation but when it gets to the end it gives me this:

I tried to reinstall Renegade again and again it does the same exact thing in cycle and I can't play Renegade untill I get it fixed. Any suggestions?
