Over a year old and good enough for me, and work.

Asus A7N8X-E Deluxe

AMD Athlon XP 2800+ Barton (OC'ed to 3200+ when needed)

1gig Samsung PC3200

ATI Radeon 9700 Pro

Hitachi 250GB SATA HDD

480W near silent Power Supply

All enclosed in a heavily modified \$20 screwless case.

Attached to a 17" KDS CRT monitor

I'm thinking this time next year I'll be due for an upgrade. I can't justify spending a shit load on a new computer after just a year.
