i build web sites for a living for small companys. If you need any help with php or hosting services then give me a pm. I wont make the whole site tho as I am a bit busy at the mo but to get you started heres a simple yet easy PHP counter

Quote:#Script needs countlog.txt with read and write permisions (666 FTP code)

```php
<?php
$datei = fopen("countlog.txt","r");
$count = fgets($datei,1000);
fclose($datei);
$count=$count + 1 ; // add one more to the count
echo "<font size='4'>$count have visted this site.</font>" ;
$datei = fopen("countlog.txt","w"); // opens to write and deletes the old count
fwrite($datei, $count);
fclose($datei);
?>
```

You just need to add the rest of the site now   or it could look a bit boring :rolleyes: . But I supose you know alot a of coding n e ways.
