I have Renguard and have had it for a while.

It automatically dwnloaded the core patches.

When im in-game i always get popups saying renguard is suggested for playing in this server.

I have Renguard and it logs in when i join the game.(says ive entered a renguard protected server).

How do i get the popups to go away me and quite a few other people have the same problem.

And get this sometimes when i join it doesnt happen, but most of the time it does. Maybe one in about 30 times im playing it doesnt.

ty Pistolserv Admin.
