Ok, Here is my problem.. I am trying to get 2 separate BrenBots to host 2 diff FDS, the configs are accurate but the only possible port that worked so far is 5017 .. I have tried port numbers 4848, 4849, 5000, 5001, 7000.. None of those worked when I had both servers running except 5017.. It does not seem like the ports are working even when I give them port numbers.. Do you have any clue on a program that would detect what ports the servers are running out of ?? ... Thanks ...
