I have seen this twice now.

Lets say the ID in question is "ICheat"

As I recall, at first I see ICheat on player list. then I see him in game, he is NOD but his name is yellow like GDI. So I message him. He cracks wise. I try to kick him. No can do. then suddenly on our 24 player server, it shows 25 players. Count up players, 24. Some people can see ICheat on their playerlist, some cant. We CAN see the little bastard in game tho. <sigh> The people that see him in their playerlist have him as a 0 score.

I am pretty certain that I have some of the details wrong. Its pretty twisted.

So my questions:

has anyone else seen this?

whats happening?

how do we get rid of him? please dont say run renguard pure. We do on one server, but not the others. The real question is, how do we kick/ban him? recall that if you try to kick him, he disappears from your player list. Oh, you cant see him on irc either.

thanks for any input/help
