---

Okay my problem with renguard is that I am running it and then connect to the servers and all is well until I get into the server. Then I get msgs from the admin of the servers saying I need to get renguard to play on this server and I tell them that is how I connected to the server through renguard but for some reason or another it is not detecting that I have... any reason for this?? I am running version 1.03... is there a newer version I need? any updates I need? A little help would be greatly appreciated.
