---

Well its been a rough few weeks setting up the outline of what our mod is going to be but once we get threw it all, suddenly our webpage is gone. I'm guessing our host cut us off. The reason, i have no idea. Is there any way i can host it from my own computer for free or can someone else host it for free i only need about 50 to 100 mb's for now. This has entirely pissed me off. To anyone who helps, Thank You.
