Cant seam to get our server to work with the latest core patch. I try to load and it pops up and then its gone never to be seen again. So I decided to uninstall the server and the patch and reinstall new fds and tried it and it worked and showed up on GSA without the patch. Then I installed the 1.03 and WHAM!!!!!! it pops up and then it blinks off and shuts down by itself. We are on a new box using Windows server 2003. Its always worked before but will not with this new version.

HELP!!!!
