---

Dexodrillthx for all tha help but i got my hud i just need to make it in to a dds file and i cant figer out how any ideas does that renegade ex do that or does xcc?

First, you wouldnt need to put the hud in a .dds file, unless its a server side mod. Just place the new image directly into the data folder, the game wil use it instead of the default.

Second, i have spent more time in .dat and mix's than most here, i spent hours working with them for my TC tutorial, and overall RenegadeEX is better, doesnt crash all the time, has a better interface, just better.
