---

i cant get it to work. i just installed ren today. i got rengaard and checked out a few sites (like <http://www.thekoss.com>) and they say wol is down. i went on europe servers and there was like 3 servers up... i got xwis but that kept just 3 servers, but with a ping of 0 instead of 200+ with wol. ( i have broadband). i had my pc wiped 2 days ago.

i came here but rengaard insists on the 1.0 cp being downloaded. 4 times now, it downloads, gets to installing and gives an error message. it says a file is missing, but it does not specify. it then proceeds to freeze my computer, so i cannot get a screenshot, and theres not much to download as it isn't specific.

i am currently downloading standalone\_cp1.zip from the post a few posts above this one.

please help me someone!
