Aprime1 can't get this Reborn clone to work... At all.

It could be a W3D issue or script, but I cannot help you out unless you help me out first.

FYI, expect errors, I'm the only one besides a special few (like two or three) that tested it before this public release. So keep that in mind...

To all:

Once I get some server issues cleared, Solid said I could barrow his server for a Renegade server (AKA the mod). Maybe we could all work something out and play it all at once, should be fun.
